

Why add TriageNow to your Work Comp Program?

Increasing the percentage of first aid and and/or home care, reducing overall claim volume.

Timely reporting allows expedited claim process.

Reducing employee time off, increasing productivity.

Providing 24/7 access to Registered Nurse for any work related injury.

Reducing incidents of fraud through immediate documentation and call recording.

Identifying potential life threatening situations not recognized by injured employee.

Relieving your supervisors from making medical based decisions for your employees.

Who uses TriageNow?

Employers who are feeling the pain of rising Workers' Comp costs and claim expenses.

Anyone in need of a systematic set of "best practices" that can drive down the costs of Workers' Comp claims by 25-40%.

There are over 6+ million non-fatal Workers' Comp claims filed in the U.S. each year; most employees seek treatment based on convenience which allow for over-utilization of services.

A pre-determined protocol coupled with a *telephonic nurse triage program* will greatly reduce these expenses and guide your injured employees to the appropriate level of care at the time of injury. Statistics show that up to 70% of workplace injuries could effectively and appropriately be handled with home care and/or First Aid, eliminating the claim completely.

TriageNow has Registered Nurses available 24/7, 365 days a year to assist your employees with work related injuries. With shorter call times, *a proprietary software and a platform designed for Workers' Comp*, and calls recorded, we are focused on getting your employee the care they need, and getting them back to work fast! We will greatly reduce your company's work comp costs.

Services We Offer

- 24/7 RN phone triage, guiding your employee to the appropriate level of care
- Completed First Report of Injury and comprehensive incident reporting
- OSHA 300 administration
- All calls recorded and archived
- Customized questions and protocols
- Military triage approach vs. hospital based system
